

# Dynatrace — AI powered, full stack, automated. Monitoring redefined.

Simplify performance monitoring of complex cloud-native environments. Dynatrace learns your application's normal behavior and proactively identifies the root cause of potential customer impact issues.

## Fact Sheet

Applications and services today are increasingly complex. Microservices architectures, global distribution and a multitude of different client technologies continue to add to this complexity. Organizations must take a radically different approach to monitoring to stay in control of these applications, and the environments they run in. Dynatrace simplifies this complexity with an easy-to-use monitoring solution that provides full operational insights out-of-the-box.

### Automated

Install a single agent and it automatically discovers your entire technology stack, instruments every component, set baselines, and quickly learns the normal performance of your environment.

### AI Powered Root Cause Analysis

Self-learning artificial intelligence continuously auto-detects technology dependencies across all layers, identifies environment anomalies, and proactively pinpoints the root cause of performance issues. No more wasted hours hunting for problems!

### Analytical

Optimize the performance of key business transactions and provide actionable insights for the business, operations, and development.

### Unified

Analyze application performance and identify issues quickly across all layers, and the broadest set of technologies; all from a single platform.

### Scalable

Designed for the largest environments, Dynatrace easily scales to 100,000+ hosts. As your application scales, Dynatrace automatically scales with it.

### Flexible Deployment

Available as an on-premise managed solution or a SaaS solution, Dynatrace lets you choose based on your company's requirements.

Dynatrace provides all-in-one application monitoring with zero configuration. Just install our OneAgent on the host, and from there Dynatrace knows your application. If something breaks, our artificial intelligence tells you exactly where and why it happened.

# Don't let inferior monitoring solutions impact your business.

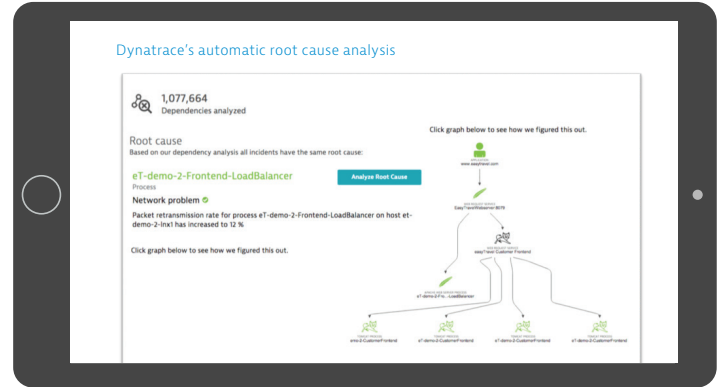

Only Dynatrace automatically provides you with the root cause of problems — allowing you to fix them faster. Gone are the days of having to manually interpret dozens of data sources to identify the root cause. Instead of receiving hundreds of alerts with the symptoms of a problem, Dynatrace provides a single problem notification that identifies the root cause of the problem.

## How is Dynatrace able to identify the root cause of a problem?

The underlying technology that powers Dynatrace is our patented PurePath® technology; allowing us to capture every single transaction — not sample transaction data. We understand all of the interdependencies across all tiers in real-time. With this understanding, Dynatrace's artificial intelligence learns your environment's normal behavior and detects performance issues automatically. When an issue is detected, it looks at billions of events and uses big data analytics to perform root cause analysis. This identifies problems faster and pinpoints the reasons for performance issues.

Get access to Dynatrace now to experience your environment in a totally new way!

## Dynatrace Digital Performance Platform — it's digital business...transformed.

Successfully improve your user experiences, launch new initiatives with confidence, reduce operational complexity and go to market faster than your competition. With the world's most complete, powerful and flexible digital performance platform for today's digital enterprises, Dynatrace has you covered.
